

Website Audit Report

github.com

Audit Date: 2026-09-09

Audit ID: 4

Scope: Performance, Accessibility, Security, UX, Images, Links, Mobile, Forms, Consent, Analytics

/public/report/23LQnsaYem0pyXco

Table of Contents

1.	Executive Summary
2.	Overall Score & Module Performance
3.	Finding Severity Distribution
4.	Critical Findings
5.	Page Preview
6.	Business Impact & Action Plan
7.	Analytics & Consent Evidence
8.	Appendix: All Findings

Executive Summary

https://github.com scored 95/100 overall, a strong result across the modules audited. Consent (89/100) is the area most in need of attention. This audit flagged 1 critical issue that should be addressed first.

Overall Status: **Healthy**

95/100	1	24	Consent (89/100)
OVERALL SCORE	CRITICAL FINDINGS	TOTAL FINDINGS	WEAKEST MODULE

Key Areas Requiring Attention

- Many render-blocking resources in <head> — Performance
- TLS certificate expiring soon — Security
- Button(s) with no visible or accessible label — Ux
- Body copy scores as hard to read — Ux
- Images missing width/height attributes — Images
- First image on the page is lazy-loaded — Images

Overall Score & Module Performance

Module	Score	Status
Security	95/100	Healthy
UX	95/100	Healthy
Images	90/100	Healthy
Links	100/100	Healthy
Mobile	95/100	Healthy
Forms	99/100	Healthy
Consent	89/100	Healthy
Analytics	100/100	Healthy

Finding Severity Distribution

24 total finding(s) across all scanned modules, by severity.

Severity	Count	Share
Critical	1	4%
Warning	11	46%
Info	12	50%

Critical Findings

1 critical finding(s).

Finding ID	Module	Finding	Affects
CONS-001	Consent	No cookie-consent banner detected https://github.com shows no recognizable consent banner or CMP markup. If this page sets non-essential cookies, this is likely a GDPR/ePrivacy compliance gap.	1 item

Evidence not captured

https://github.com

Business Impact

WARNING	Many render-blocking resources in <head> [PERF-001] · Performance Slower pages increase bounce rate and lower conversion, especially on mobile.
WARNING	TLS certificate expiring soon [SEC-001] · Security Leaves visitor data and site trust exposed to compromise or defacement.
WARNING	Button(s) with no visible or accessible label [UX-002] · Ux Left unresolved, this continues to work against the site's core goals.
WARNING	Body copy scores as hard to read [UX-004] · Ux Left unresolved, this continues to work against the site's core goals.
WARNING	Images missing width/height attributes [IMG-001] · Images Left unresolved, this continues to work against the site's core goals.

Action Plan

Phase 1 – Immediate / High Priority Actions

Priority	Finding ID	Module	Recommended Action
Critical	CONS-001	Consent	No cookie-consent banner detected: Add a consent banner (a CMP like OneTrust/Cookiebot, or a compliant custom implementation) before any non-essential cookies are set.

Phase 2 – Short-Term Actions

Priority	Finding ID	Module	Recommended Action
Warning	CONS-002	Consent	Scripts are not held back until consent is given: Gate non-essential scripts (analytics, ads, embeds) behind an explicit consent check rather than loading them unconditionally.
Warning	CONS-003	Consent	Reject button could not be located to test: Confirm a reject control is rendered and reachable without JavaScript errors.
Warning	CONS-004	Consent	Accept button could not be located to test: Confirm an accept control is rendered and reachable without JavaScript errors.

Priority	Finding ID	Module	Recommended Action
Warning	IMG-001	Images	Images missing width/height attributes: Add width and height attributes (or a CSS aspect-ratio) matching the image's intrinsic size so the browser can reserve layout space up front.
Warning	IMG-002	Images	First image on the page is lazy-loaded: Remove loading="lazy" from the first/hero image (and consider fetchpriority="high" on it instead); reserve lazy loading for images further down the page.

Phase 3 – Optimization Actions

Priority	Finding ID	Module	Recommended Action
Info	AI-001	AI	AI review: Consent is the biggest opportunity: Prioritize the consent findings from this audit before the next run.
Info	PERF-002	Performance	Large HTML document: Reduce inline scripts/styles and repeated markup; consider server-side pagination for very long pages.
Info	PERF-003	Performance	Images missing explicit dimensions: Add width and height attributes (or aspect-ratio in CSS) to every so the browser reserves the right amount of space.
Info	SEC-002	Security	Missing Permissions-Policy header: Add a `Permissions-Policy` header that explicitly disables APIs the site doesn't use, e.g. `Permissions-Policy: camera=(), microphone=(), geolocation=()`.
Info	SEC-003	Security	Missing Cross-Origin-Opener-Policy header: Add `Cross-Origin-Opener-Policy: same-origin` unless the site specifically relies on cross-origin window references.

Analytics Technology Detection

Tracking technologies identified in the page's markup, independent of whether runtime behaviour was validated.

No analytics or tag-management technology was detected on this page.

Analytics Runtime Validation

Runtime validation (Page View / Scroll / Click) was not run for this audit — shown as NOT TESTED rather than pass/fail.

Consent & Cookie Compliance

Check	Result
Cookie consent banner present	FAIL
Non-essential scripts blocked before consent	FAIL

GDPR Assessment

Check	Result
Consent banner	FAIL
Accept control	FAIL
Reject control	FAIL
Reject parity	FAIL
Non-essential trackers blocked before consent	FAIL
Non-essential cookies blocked before consent	FAIL
Consent is granular	PASS
Privacy policy available	FAIL
Consent withdrawal available	FAIL
Reject actually blocks tracking	N/A

GDPR compliant overall: FAIL

CCPA Assessment

Check	Result
Privacy policy available	FAIL
"Your Privacy Choices" link present	FAIL
"Do Not Sell or Share My Information" link present	FAIL
Opt-out mechanism reachable	FAIL
Global Privacy Control (GPC) signal handling detected	FAIL
Opt-out actually stops tracking	N/A

CCPA compliant overall: FAIL

Reject / Accept / Personalize runtime checks: NOT TESTED

3 cookie(s) detected, 0 third-party tracker(s) identified.

Consent Evidence

Evidence not captured

Initial Banner

Appendix: All Findings

24 finding(s) across all modules.

Finding ID	Severity	Module	Finding
CONS-001	CRITICAL	consent	No cookie-consent banner detected https://github.com shows no recognizable consent banner or CMP markup. If this page sets non-essential cookies, this is likely a GDPR/ePrivacy compliance gap.
CONS-002	WARNING	consent	Scripts are not held back until consent is given https://github.com does not appear to block non-essential scripts before consent (based on the page's own declared Consent Mode default only — not independently verified).
CONS-003	WARNING	consent	Reject button could not be located to test https://github.com: no clickable Reject/Decline control was found in the rendered page, so this behaviour could not be runtime-verified.
CONS-004	WARNING	consent	Accept button could not be located to test https://github.com: no clickable Accept/Allow control was found in the rendered page, so this behaviour could not be runtime-verified.
IMG-001	WARNING	images	Images missing width/height attributes 24 of 24 image(s) on https://github.com have no width/height attributes (or aspect-ratio style): https://github.githubassets.com/assets/particles-170bd1fd231f4669.png, / /images.ctfassets.net/8aevphvgewt8/g1XhuDG7foMyNWIElpGJj/b40a790b854d0803704deb7905b1bd82/...
IMG-002	WARNING	images	First image on the page is lazy-loaded https://github.com's first in document order has loading="lazy". This image is the one most likely to be above the fold and the Largest Contentful Paint element — lazy-loading it defers its fetch instead of prioritizing it, which typically hurts LCP rat...
IMG-003	WARNING	images	Broken image sources found 22 image(s) on https://github.com returned an error status: https://github.githubassets.com/assets/particles-170bd1fd231f4669.png (403), https://images.ctfassets.net/8aevphvgewt8/g1XhuDG7foMyNWIElpGJj/b40a790b854d0803704deb7905b1bd82/logo-duolingo-14477f9e54a...

Finding ID	Severity	Module	Finding
MOB-002	WARNING	mobile	Many render-blocking resources for a mobile connection The page references 48 script/stylesheets tags that can block first render. On a fast desktop connection this is often invisible; on a throttled mobile connection each blocking request adds a full round-trip before the page can paint.
PERF-001	WARNING	performance	Many render-blocking resources in <head> 29 synchronous scripts/stylesheets (0 script(s), 29 stylesheet(s)) load in <head> before the browser can start painting the page.
SEC-001	WARNING	security	TLS certificate expiring soon The certificate for github.com expires in 23 day(s) (not_after: Oct 2 20:44:39 2026 GMT).
UX-002	WARNING	ux	Button(s) with no visible or accessible label https://github.com has 1 button-like element(s) with no text content, value, or aria-label. Visitors — and especially screen reader users, who hear nothing at all announced — have no way to know what the control does.
UX-004	WARNING	ux	Body copy scores as hard to read https://github.com's visible text scores 29/100 on the Flesch Reading Ease scale (very difficult to read) — driven by long sentences and/or long, multi-syllable words. General audiences typically read most comfortably in the 60-70 range (roughly an 8th-grade...
A11Y-001	INFO	accessibility	Redundant ARIA role https://github.com has 2 element(s) with a role attribute that just restates the element's own native role (e.g. role="button" on a <button>), which adds nothing and is one more place for markup to drift out of sync.
AI-001	INFO	ai	AI review: Consent is the biggest opportunity Based on the other module scores, consent (89/100) is where https://github.com would benefit most from attention first.
FORM-001	INFO	forms	No CAPTCHA or bot-mitigation widget detected on a sensitive form https://github.com has 2 form(s) that look like login, signup, contact, or similar (by field type or form identity), but no recognizable CAPTCHA/bot-mitigation script (reCAPTCHA, hCaptcha, Turnstile, FunCaptcha) was found on the page. Forms like these are com...
MOB-001	INFO	mobile	No responsive breakpoints found in inline CSS https://github.com has <style> block CSS but no @media query anywhere in it, suggesting the visible styling doesn't change across screen sizes. (An external stylesheet could still carry breakpoints — this only inspects inline and <style>-block CSS.)
MOB-003	INFO	mobile	High image count on a single page The page loads 24 tags. On mobile, each additional image competes for limited bandwidth on a connection that's often both slower and metered compared to desktop broadband.
PERF-002	INFO	performance	Large HTML document The initial HTML document is 563KB. This is the document alone, before any linked CSS/JS/images even start downloading.
PERF-003	INFO	performance	Images missing explicit dimensions 24 of 24 images have no width/height attributes, so the browser can't reserve space for them before they load — a common cause of layout shift.

Finding ID	Severity	Module	Finding
SEC-002	INFO	security	Missing Permissions-Policy header https://github.com does not send a `Permissions-Policy` header, so every powerful browser API (camera, microphone, geolocation, USB, etc.) stays available to any script running on the page — including third-party scripts — with no opt-out declared.
SEC-003	INFO	security	Missing Cross-Origin-Opener-Policy header https://github.com does not send `Cross-Origin-Opener-Policy`, leaving the page's window reachable from cross-origin popups it opens (or that open it), which can enable cross-window attacks like tabnabbing-style reference leaks.
SEC-004	INFO	security	Server software/version disclosed in response headers https://github.com exposes implementation details via response headers (server: github.com). This makes it easier for an attacker to look up known vulnerabilities for the exact software version in use.
UX-001	INFO	ux	Primary navigation has a large number of links https://github.com's main navigation contains 61 links (more than 10). A long flat list of top-level choices makes it harder for visitors to scan and pick the right one, and is a common sign navigation would benefit from grouping into a dropdown/mega-menu str...
UX-003	INFO	ux	Interactive elements packed together with no spacing markup https://github.com has a run of 5 links/buttons in a row (e.g. Code, Plan, Collaborate, ...) with no whitespace or separating element between them in the markup. Without CSS spacing explicitly compensating, tightly packed tap targets are a common source of ac...
